

Dear Sir or Madam,

MINT Version 6 was released on March 31 and features a number of innovative functions keenly awaited by the aviation industry! This Newsletter provides a quick overview about the latest and greatest!

MINT UCON in Dubai was a very successful event and deserves a [special review](#), too.

CAT Magazine features an article about mobile device usage in aviation and MINT is ranked front-runner thanks to our on-line grading and evaluation tool.

Finally, we'd be happy to have a personal chat with you at **WATS 2011 in Orlando** (April 19-21).

Hoping to see you there,

Ilka Gerlach
Marketing & Sales Assistant

APP, APP and AWAY - Mobile Devices in Aviation Training

This article sheds light on how the aviation industry goes with latest technology and makes use of software apps and mobile communication devices. MINT provides student performance evaluation tools usable on tablet computers. The on-line grade sheets are used to evaluate SIM sessions or Cabin Crew performance, but also trainees get the chance to give feedback on instructors and courses via their MyMint account.

Events are followed by Actions

This new, very versatile Event Handler concept can be leveraged for the most different customer requirements. System behavior becomes configurable and Add-Ons can be created in a very straightforward way. It can be used for many things and notifications or report generation following certain actions in the system are just 2 basic examples for a variety of use cases to come.

Based on this concept, customers can furthermore set up their own menus in MINT TMS so that the system features only context menu entries that they use.

A whole new world of reporting options

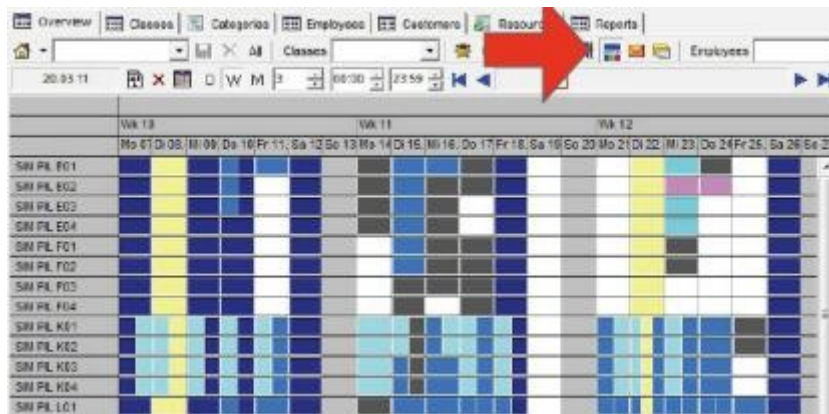

Report layouts can be conveniently set up via the newly embedded designer tool "iReport" and without any programming needed. They feature different graphical options and can be saved in various formats.

Scheduler Enhancements

- 1) Don't need just 1 instructor but 2? That's now easily adjustable on the individual class.
- 2) An instructor calls in sick. Who can cover up for the rest of the day? The new availability icon "DAY" immediately gives info.

Avl	Name	Alt
DAY	Abela, Cesar	1
X	Dixon, Jan	1
✓	Hansen, Bob	1
ALL	Knudsen, Arthur	1

3) A new display function shows if a resource has parallel assignments during a day.

User Permissions

More powerful does not mean more complex. On the contrary, our new permission concept has been simplified AND provides a more detailed way to define user rights and a better overview altogether.

Audit Trail

Detailed information on what was changed when and by which user is now very easily accessible.

Training Portal

Our new product, the Training Portal grows more and more into the powerful, full-fledged on-line market place for Training Providers. Both individual trainee bookings and bulk registration are now possible as is on-line payment via PayPal. [Learn more...](#)

COMING SOON

Add-On: Schedule connecting to MS Outlook!

Through an MS Exchange Interface, scheduling data from MINT TMS will be visible in your Outlook account!
