Training Management with MINT TMS. The Principle

MINT hits the mark with its innovative compliance & training management solution. It has been designed in close association with successful training organizations and is especially suited to meet aviation requirements. Major industry players as well as smaller training centers use MINT TMS to streamline their flight, maintenance and air navigation service training scheduling and staff record keeping! Its modular design perfectly supports the business process and offers tools and techniques that are essential for achieving EASA, FAA or AQP compliance. MINT TMS evaluates consequences of different strategies beforehand - and not when it is too late. It improves your internal and external communication and provides you with the information you need - at once.

MINT TMS Modules and their Role in the Business Process

Easy Integration with MINT Application Programming Interface

(1) It All Starts with Training Demand.

All demand for transition, recurrent, continuation, new hire and requal training as well as any other requirement is managed in MINT WebAssistant.

(2) Set Up a Training Curriculum.

MINT Designer is the state-of-the-art module for setting up your products with exact curriculum specifications. Each curriculum contains details on training syllabus, content, instructor and resource requirements and trainee assessments.

(3) Conjure a Clear and Sound Training Schedule.

A lot of MINT TMS' magic lies in MINT Scheduler. It handles all stages of planning and scheduling. Complete training schedules can be generated automatically while respecting your corporate work rules! What used to take days or even weeks can now be achieved within minutes.

(4) Web-based Access to Schedules and Sign-Off.

MyMINT offers powerful online sign-off and grading features, like simulator grade sheets or feedback forms that students fill out.

It is a web module where instructors and trainees can also access training schedules and download their records.

(5) Get the Most out of Your Valuable Resources.

The obtained qualifications are registered in MINT WebAssistant and certificates can be generated. This module is also used to administer and monitor instructors' and trainees' authorizations, so that reliable quality data on validity and currency is available any time.

Powerful query options provide detailed overviews about qualifications, licenses, training history and training needs, so that a forecast on training demand is available in the system.

MINT TMS Release 6 Functionality Highlights

Compliance and Record Keeping

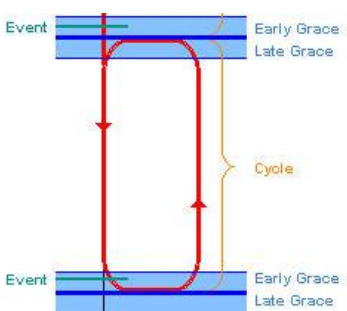

Flexible Record Keeping.

The unique and flexible compliance management module MINT WebAssistant keeps all records in one place and retrievable any time. It is possible to document all relevant licenses, authorizations, qualifications as well as training incl. CBT/WBT results. Records can have prerequisites and recurrent training requirements.

Reminders by Renewal Workflow.

Let the system do the monitoring. When licenses expire, it sends out notifications to the people who need to get into action. Renewal applications can be forwarded and escalated until they have been approved.

Training Need List based on Expiry Dates.

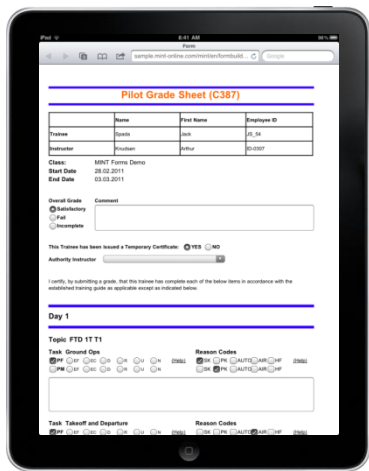

MINT TMS calculates due dates in a Currency Queue and produces a training need list to see who is due when and what needs to be done. Training courses can thereby be scheduled based on the demand existing in the system already.

Electronic Grading – Achieve AQP Compliance.

With MINT TMS comes the great chance to create any form exactly how you need it – from grading items to corporate layout.

These forms are then made available in MyMINT to be filled in by instructors and trainees.

So, why not take the Apple iPad™ and fill in grade sheets online?

Powerful Reporting.

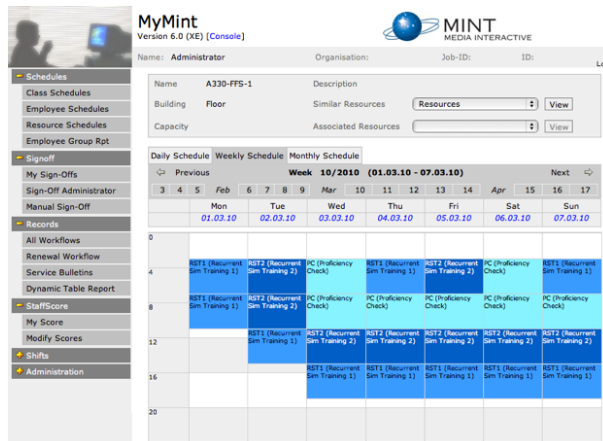

MINT TMS contains powerful and user-friendly ad hoc reporting functionalities to generate and execute complex record queries simply via drag & drop. Further standard reports already provide all information you need.

Scheduling

Push the Button: Automatic Scheduling

MINT TMS creates an optimized training schedule for you while considering business rules, preferences and constraints along the way.

You can still schedule and override assignments manually. But don't hesitate to make MINT TMS do the work: apply the rescheduling function. All affected employees can be notified automatically.

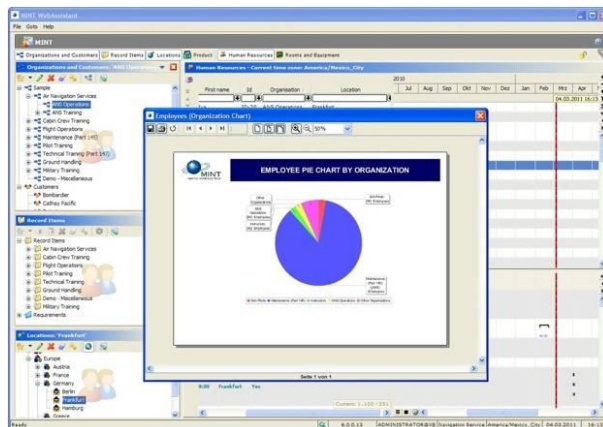

Forecasts and What-If-Scenarios.

The planning horizon can be changed any time according to requirements and information base. An unlimited number of different schedules can be created, so that what-if-scenarios with different inputs can be evaluated and compared easily.

Through adding virtual resources or simulating e.g. retiring employees you have powerful functionality at hand to support strategic decision-making.

Conflict Checking.

MINT TMS visually flags conflicts and issues within the schedule. Unqualified instructors, missing assignments or double-bookings are immediately visible and can be resolved easily before causing trouble.

Benefits for your Organization. Have a few aces up your sleeve.

Operational Benefits

Admin Effort cut down by up to 70 %.

First, MINT TMS heavily reduces paperwork and planning effort. It makes your employees manage schedules, instead of just assembling them.

Second, a high level of automation significantly lowers effort also on the record keeping side while achieving top data security and reliability.

Saving Money by Gaining Time.

Resources are assigned in the most efficient way. Especially expensive assets such as simulators and instructors can finally generate maximum profit through optimized usage.

Achieving Regulatory Compliance.

MINT TMS significantly helps to obtain and ensure compliance by monitoring relevant rules like record prerequisites, qualification issues or work rules. In particular, it provides innovative functionality to implement AQP compliant processes.

Communication Tools.

Users communicate among each other through the built in e-mail program. But also system notifications are sent out upon certain events like schedule changes. Maybe you want some reports to be sent regularly and automatically to certain recipients?

Our flexibility knows no limits! And limits are the only thing that we do not know how to develop.

Beneficial Technology

Robust and Proven Solution.

The initial version of the MINT TMS was first used in 1997 to generate the annual schedule for Lufthansa Technical Training. Today, MINT TMS is the market leading training management system and training organizations of different areas rely on MINT TMS year after year.

Intuitive User Interface and Open Architecture.

The intuitive, state-of-the-art graphical user interface of MINT TMS encapsulates a lot of the complexity of the system.

Through our Application Programming Interface (API), MINT TMS is extendable and easy to integrate precisely into customers' existing and future IT architecture.

At the Forefront of Technology.

MINT has always lived up to the fast changing aviation world and in addition to functional enhancements, state-of-the-art technology is the key to our success.

MINT TMS consists of a mixture of web-based and windows-based clients. This multi-tier and web-enabled system is future-proof and stands for technological innovation.

Users profit from a windows-like graphical user interface (GUI), guaranteeing user efficiency, productivity and complex user interaction.

MINT TMS runs on an Oracle Database which ensures performance, data security and scalability.

The program is available as licensed or hosted solution.
